

A-Gang handles all your creature comforts such as maintaining the distilling plants which produce the fresh water. The heating ventilating and air conditioning system to keep you warm in the cold places and cooler in the hot places. The boilers which provide steam to heat the water, keep those cold spaces warm and help cook all of the exquisite cuisine served onboard the Hotel POLAR SEA. We also maintain the small boats to provide the crew with water taxi service while anchored out of ports of call and to assist in any extra-circ-ular activities that you might enjoy such as cargo ops. In addition to hotel services, A-Gang also maintains the steering gear which gets us pointed in the right direction of all those great libo ports. The Deck Force is constantly thanking us for providing S/S air and central hydraulic power for the cranes and other equipment so that they can run pneumatic tools. The list of things could go on for a while, but basically we work all over the ship with home base being the Machine Shop, and we are always kept quite busy.
