Whenever a sailor aboard **Westwind** thinks of electrical power or "Ready Kilowatt", he thinks of the Electrician's Mate. Under the control of "M" Division, these men are responsible for the maintenance of an electric plant which is similar in many details to those which provide electrical power for the communities of the United States.

These highly skilled craftsmen and "bonus" babies are required to have extensive knowledge of electrical fields and electricity's relationship to machinery. Of primary importance is their maintenance of all electrical equipment associated with our main propulsion plant. In addition, they are responsible for all other electrical equipment on board **Westwind** with the exception of her electronic and communications gear.

Whatever it is, if it makes, carries, stores or uses electricity, it is the business of the men in the electric shop.

Garrett and Chief Cushing read blue print.

Watchstanders Goodwin, Grubbs and Franklin adjust the main propulsion control.
